

Opioid agreement

(to be included on plan section of office visit note if patient is on >60 MME)

Smartphrase: .opioidagreement

Per the HFHS Pain Protocol, patient has agreed to reduce @his@ opioid use prior to surgery to below 60 MME or by 50% of current MME (whichever is greater). It has been explained to the patient that reduction in opioids prior to surgery promotes better outcomes - including better pain control after surgery, early ambulation after surgery, and timely discharge from the hospital. Patient understands that we will inform @his@ prescribing provider of the above and has been instructed to follow-up with them for further assistance.
